

# gemini lighting kits

Bowens extra-value 'Gemini' lighting kits contain everything you need to get started in quality studio or location photography.

These kits include two or three Gemini R or Rx monolights together with lighting support stands.

To control the light we include reflect or shoot-thru silver/white Umbrellas, with wide-angle umbrella reflectors.

The umbrellas are perfect for portraiture and many still-life applications - the black cover can be removed allowing you to fire the light through the umbrella like a softbox.

These kits now include a Pulsar Tx Radio Trigger and a Pulsar Rx Radio Receiver Card to wirelessly sync your camera to your lights.

Everything is packed into a handy kit case for easy transportation.
