

Easy steps to separate the Kozo Double Layered

Kozo Double Layered is consisted of the paper with 100% of kozo on the front and the paper made with pulp for the back side. To achieve printing on a very thin paper which would not go through a printer by alone, the paper is made with two different types of papers which can be separated after it is printed. It is recommended to use for a print of scroll paintings as well as for any art works and printing replicas.

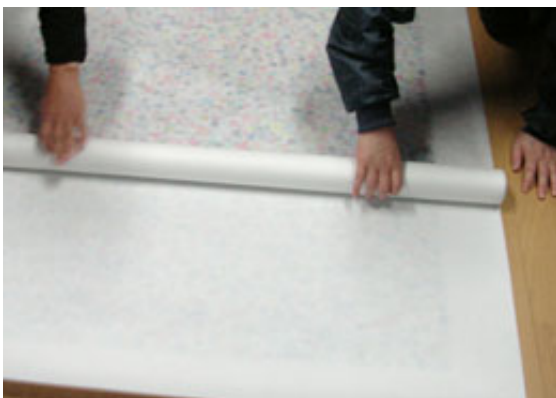

STEP 01 | Remove the other side of sheet.

At the beginning, use a cutting knife to separate the sheets. Work on the both sides of the sheet and remove each other carefully.

STEP 02 | Use a paper tube or a round stick.

Have a paper tube or a round stick ready. After removing a few inches at the beginning, use a tube or a round stick to bind the paper in parallel.

STEP 03 | Bind the sheet evenly.

Carefully separate the sheets by binding to the tube or the round stick. When separating the sheet, lift the tube approximately in 45 degrees from another sheet to prevent from damaging the printed side.
