

# DASS™ SuperSauce Concentrate

This transfer medium will move the pigment ink from an image printed on DASS™ Classic Transfer Film to smooth wood or gesso primed substrate. Seamlessly add digital images to your acrylic paintings. Build photo collages directly on walls primed with Liquitex Gesso.

After mixing apply the provided label to the bottle of DASS™ SuperSauce.

**CAUTION:** The mixture is flammable. See warnings on the alcohol bottle.

**CAUTION:** Handle with care. Spills are slippery. Clean brush with alcohol.

**DO NOT** use with food utensils or store with food. Wear gloves when working with this product.

For use with experimental mixed media processes. The substrate or paint must be completely dry for this process to work properly.

**KEEP OUT OF REACH OF CHILDREN AND PETS**

**Tools and Materials Needed:**

- DASS™ SuperSauce Concentrate
- 1-one quart wide mouth canning jar
- 16 oz. of 91% isopropyl alcohol (drug store)
- One tablespoon measuring spoon
- Protective gloves and eye protection

**DIRECTIONS:**

Pour 16 ounces of 91% isopropyl alcohol in a glass jar. Add four tablespoons of the DASS™ SuperSauce Concentrate. Stir, then cover with a lid and allow 6 hours for it to dissolve and thicken. Occasionally stir the solution. Store closed away from heat or flame.

Assemble the ingredients

Pour the 16 ounce bottle of 91% isopropyl alcohol in to a one quart glass canning jar.

NOTE: 70% isopropyl alcohol will not work

Put 4 tablespoons of the DASS™ SuperSauce Concentrate into the alcohol. The concentrate will form white clumps on the bottom of the jar.

Tightly cap the jar

Shake the jar to mix the solution. It will take about 4-6 hours for all of the material to dissolve. As it dissolves it will become clear. The solution will be about as thick as warm syrup.

After mixing apply the provided label to the bottle of DASS™ SuperSauce.

**WARNING:** The solution warnings are the same as on the original bottle of isopropyl alcohol. The mixture is flammable. See warnings on the alcohol bottle.

- Do not heat the mixture or dry the art using any heat source like a hair dryer.
- Use with adequate ventilation
- Wear protective gloves and eye protection
- Do not use the mixture in a room with any open flame like a hot water heater or furnace
- Store capped and away from heat or flames.
- Keep out of the reach of children

Brush and tools must be cleaned with isopropyl alcohol. If washed in water the brush will turn gummy and be unusable.

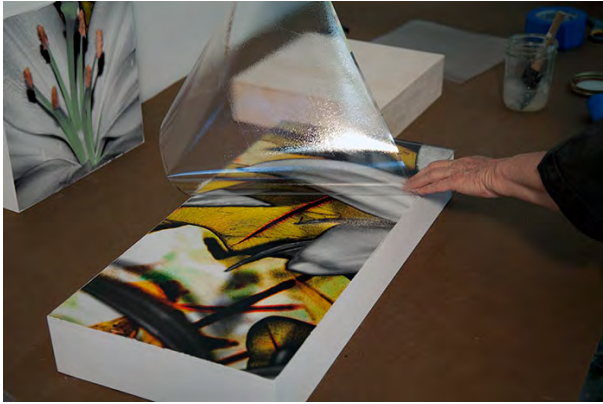

Use about 1 tablespoon per square foot. 16 ounces will cover 32 square feet.

**CAUTION:** Never add water. Water will make the solution unusable. Do not apply to wet paint or any wet substrate.

Never reuse the any tools or containers for food.

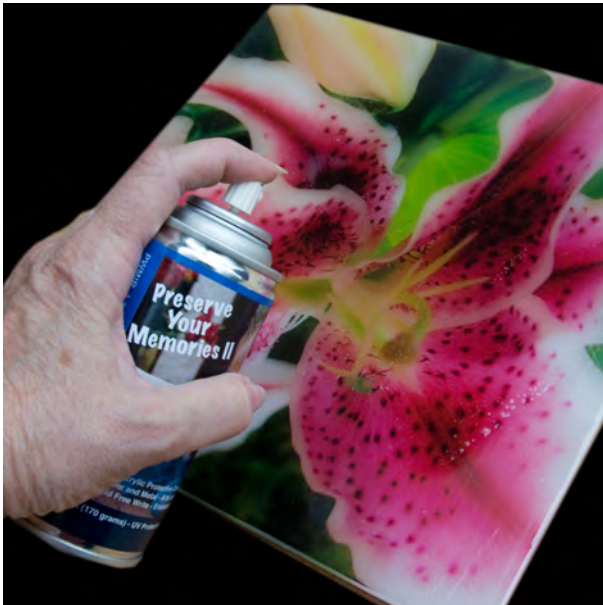

# DASS™ SuperSauce

Inkjet image printed on DASS Classic Transfer film being applied to a birch box primed with Liquitex Gesso.

Pigment ink using matte black ink

## Post Coat

Allow at least 3 days for the image to dry before applying a postcoat.

All the alcohol in the SuperSauce must evaporate before sealing the image. In humid climates or in colder locations this may take a week. This also allows the pigment inks to fully dry.

Apply an aerosol spray like Preserve Your Memories II. This spray will water proof the image.

Warning! Do not use a hair dryer to dry the image. The alcohol fumes could ignite in the heating element of the hair dryer.

Tips:

Store your sponge brush that was used to apply the DASS SupperSauce in a second jar with about one inch of isopropyl alcohol and it will never need cleaning and be ready to use again.
